100805918, Rev. D Gen 17 - February 2017

Document Revision History

Revision	Date	Pages affected
Rev. A	08/05/2016	Initial release.
Rev. B	09/07/2016	fc, 5-7, 10-12, 15-17 & 28-29: Added 5TB model, specs & references 8 & 11: Updated Avg seek times to 15.0 ms 12: DC power - Standby/Sleep edits) 17: Added Korean text for Class B device warning
Rev. C	11/28/2016	 fc: New BarraCuda logo fc, 5, 14, 20 & 23: Changed name to BarraCuda fc, 5-6, 10-12, 15-16 & 28-29: Remove 5TB model & specs 6, 8 & 10: Revised Data transfer rates 6, 8 & 11: Removed Seek times from all capacities 7-8 & 15: Changed Op shock to 80Gs (read) / 70 Gs (write) at 2ms 12: Section 2.8.1 Power Consumption & DC Power table edits 13: Revised Section 2.8.4 Power-management modes 17: Revised to MSIP Korean text Class B device warning 21-22: Revised Figures 2 & 3 mechanical drawings
Rev. D	02/21/2017	 7 & 9: Added Power-off/Flush Command note after Tables 1 & 2. 7 & 9: Revised Rated Workload statements 17: Added Section 2.11.1 Data loss under power interruption with write cache enabled

Call 877-PUB-TEK1(877-782-8351) to request permission. When referring to drive capacity, one gigabyte, or GB, equals one billion bytes and one terabyte, or TB, equals one trillion bytes. Your computer's operating system may use a different standard of measurement and report a lower capacity. In addition, some of the listed capacity is used for formatting and other functions, and thus will not be available for data storage. Actual quantities will vary based on various factors, including file size, file format, features and application software. Actual data rates may vary depending on operating environment and other factors. The export or re-export of hardware or software containing encryption may be regulated by the U.S. Department of Commerce, Bureau of Industry and Security (for more information, visit www.bis.doc.gov), and controlled for import and use outside of the U.S. Seagate reserves the right to change, without notice, product offerings or specifications.

1.0 Introduction

This manual describes the functional, mechanical and interface specifications for the following Seagate® BarraCuda® model drives:

ST8000DM004 ST6000DM003 ST4000DM004 ST3000DM007 ST2000DM005

These drives provide the following key features:

- Compliant with RoHS requirements in China and Europe.
- High instantaneous (burst) data-transfer rates (up to 600MB per second).
- Native Command Queuing with command ordering to increase performance in demanding applications.
- Quiet operation.
- SeaTools diagnostic software performs a drive self-test that eliminates unnecessary drive returns.
- State-of-the-art cache and on-the-fly error-correction algorithms.
- Support for S.M.A.R.T. drive monitoring and reporting.
- Supports latching SATA cables and connectors.
- TGMR recording technology provides the drives with increased areal density.
- Worldwide Name (WWN) capability uniquely identifies the drive.

1.1 About the SATA interface

The Serial ATA (SATA) interface provides several advantages over the traditional (parallel) ATA interface. The primary advantages include:

- Easy installation and configuration with true plug-and-play connectivity. It is not necessary to set any jumpers or other configuration options.
- Thinner and more flexible cabling for improved enclosure airflow and ease of installation.
- Scalability to higher performance levels.

In addition, SATA makes the transition from parallel ATA easy by providing legacy software support. SATA was designed to allow users to install a SATA host adapter and SATA disk drive in the current system and expect all of the existing applications to work as normal.

The SATA interface connects each disk drive in a point-to-point configuration with the SATA host adapter. There is no master/slave relationship with SATA devices like there is with parallel ATA. If two drives are attached on one SATA host adapter, the host operating system views the two devices as if they were both "masters" on two separate ports. This essentially means both drives behave as if they are Device 0 (master) devices.

The SATA host adapter and drive share the function of emulating parallel ATA device behavior to provide backward compatibility with existing host systems and software. The Command and Control Block registers, PIO and DMA data transfers, resets, and interrupts are all emulated.

The SATA host adapter contains a set of registers that shadow the contents of the traditional device registers, referred to as the Shadow Register Block. All SATA devices behave like Device 0 devices. For additional information about how SATA emulates parallel ATA, refer to the "Serial ATA International Organization: Serial ATA Revision 3.0". The specification can be downloaded from www.sata-io.org.

Note	The host adapter may, optionally, emulate a master/slave environment to host software where two devices on separate SATA ports are represented to host software as a Device 0 (master) and Device 1 (slave) accessed at the same set of host bus addresses. A host adapter that emulates a master/slave environment manages two sets of shadow registers. This is not a typical SATA environment.

2.0 Drive Specifications

Unless otherwise noted, all specifications are measured under ambient conditions, at 25°C, and nominal power. For convenience, the phrases *the drive* and *this drive* are used throughout this manual to indicate the following drive models:

ST8000DM004 ST6000DM003 ST4000DM004 ST3000DM007 ST2000DM005

2.1 Specification summary tables

The specifications listed in **Table 1** are for quick reference. For details on specification measurement or definition, refer to the appropriate section of this manual.

Drive Specification*	ST8000DM004	ST6000DM003
Formatted capacity (512 bytes/sector)**	8000GB (8TB)	6000GB (6TB)
Guaranteed sectors	15,628,053,168	11,721,045,168
Heads	8	6
Disks	4	3
Bytes per sector (4K physical emulated at 512-byte sectors)	409	96
Default sectors per track	63	3
Default read/write heads	16	5
Default cylinders	16,3	83
Recording density (max)	2294 k	۲.B/in
Track density (avg)	540 ktra	icks/in
Areal density (avg)	1203 G	b/in ²
SATA interface transfer rate	600 N	1B/s
Maximum data transfer rate	190 M	1B/s
ATA data-transfer modes supported	PIO modes: 0 to 4 Multiword DMA modes: 0 to 2 Ultra DMA modes 0 to 6	
Cache buffer	256MB	
Height (max)	26.1mm / 1.028 in	
Width (max)	101.6mm (± 0.25)	/ 4.0 in (± 0.010)
Length (max)	146.99mm	/ 5.787 in
Weight (typical)	630g / 1.389 lb	610g / 1.345 lb
Average latency	6.0 r	ns
Power-on to ready (typ)	15.0	Ds
Standby to ready (typ)	15.0	Ds
Startup current (typical) 12V	2.0	A
Voltage tolerance (including noise)	5V ±5% 12V ±10%	
Non-Operating (Ambient °C)	-40° to 70°	
Operating ambient temperature (min °C)	0°	
Operating temperature (drive case max °C)	60° [†]	
Temperature gradient	20°C per hour max (operating) 30°C per hour max (non-operating)	
Relative humidity	5% to 90% (operating) 5% to 95% (non-operating)	
Relative humidity gradient (max)	30% pe	r hour

 Table 1
 Drive specifications summary for 8TB & 6TB model

Drive Specification*	ST8000DM004	ST6000DM003	
Wet bulb temperature (max)	30°C max (operating) 40°C max (non-operating)		
Altitude, operating		o 3048m o 10,000 ft)	
Altitude, non-operating (below mean sea level, max)		o12,192m o 40,000+ ft)	
Operational shock (max)	80 Gs (read) / 70	Gs (write) at 2ms	
Non-operational shock (max)	300 Gs	at 2ms

Vibration, non-operating	5Hz to 22Hz: 3.0 Gs 22Hz to 350Hz: 3.0 Gs 350Hz to 500Hz: 3.0 Gs		
Drive acoustics, sound power			
Idle***	2.3 bels (typical) 2.5 bels (max)		
Seek	2.5 bels (typical) 2.6 bels (max)		
Non-recoverable read errors	1 per 10 ¹⁵ bits read		
Rated workload average annualized workload annualized rate may degrade a		TB/year. s the I/O workload does not exceed the 55 TB/year. Workloads exceeding the reliability as experienced by the particular oad rate limit is in units of TB per calendar	
Warranty	To determine the warranty for a specific drive, use a web browser to access the following web page: http://www.seagate.com/support/warranty-and-replacemen From this page, click on "Is my Drive under Warranty". Users will be asked to provid the drive serial number, model number (or part number) and country of purchase. The system will display the warranty information for the drive.		
Load/unload cycles	600,000 at 25°C,	50% rel. humidity	
Supports hotplug operation per the Serial ATA Revision 3.2 specification	Yes		

 Table 1
 Drive specifications summary for 8TB & 6TB model (continued)

* All specifications above are based on native configurations.

** One GB equals one billion bytes and 1TB equals one trillion bytes when referring to hard drive capacity. Accessible capacity may vary depending on operating environment and formatting.

*** During periods of drive idle, some offline activity may occur according to the S.M.A.R.T. specification, which may increase acoustic and power to operational levels.

+ Seagate does not recommend operating at sustained case temperatures above 60°C. Operating at higher temperatures will reduce useful life of the product.

Note If the drive is powered-off before issuing flush cache command, in some instances, the end user data in the DRAM cache might not be committed to the disk.

Drive Specification*	ST4000DM004	ST3000DM007	ST2000DM005
Formatted capacity (512 bytes/sector)**	4000GB (4TB)	3000GB (3TB)	2000GB (2TB)

 Table 2
 Drive specifications summary for 4TB, 3TB & 2TB model

Table 2	Drive specifications summar	y for 4TB, 3TB & 2TB model (continued)
---------	-----------------------------	----------------------------------------

Drive Specification*	ST4000DM004	ST3000DM007	ST2000DM005	
Vibration, non-operating	5Hz to 22Hz: 3.0 Gs 22Hz to 350Hz: 3.0 Gs 350Hz to 500Hz: 3.0 Gs		1	
Drive acoustics, sound power				
Idle***		(typical) ls (max)	2.0 bels (typical) 2.1 bels (max)	
Seek		2.4 bels (typical)2.2 bels (typical)2.7 bels (max)2.3 bels (max)		
Non-recoverable read errors		1 per 10 ¹⁵ bits read		
Rated workload	Average annualized workload rating: <55 TB/year. The specifications for the product assumes the I/O workload does not exceed the average annualized workload rate limit of 55 TB/year. Workloads exceeding the annualized rate may degrade and impact reliability as experienced by the particular application. The average annualized workload rate limit is in units of TB per calendar year.			
Warranty	To determine the warranty for a specific drive, use a web browser to access the following web page: http://www.seagate.com/support/warranty-and-replacements/ From this page, click on "Is my Drive under Warranty". Users will be asked to provide the drive serial number, model number (or part number) and country of purchase. The system will display the warranty information for the drive.			
Load/unload cycles	6	600,000 at 25°C, 50% rel. humidity		
Supports hotplug operation per the Serial ATA Revision 3.2 specification	Yes			

* All specifications above are based on native configurations.

** One GB equals one billion bytes and 1TB equals one trillion bytes when referring to hard drive capacity. Accessible capacity may vary depending on operating environment and formatting.

- *** During periods of drive idle, some offline activity may occur according to the S.M.A.R.T. specification, which may increase acoustic and power to operational levels.
- Seagate does not recommend operating at sustained case temperatures above 60°C. Operating at higher temperatures will reduce useful life of the product.

Note	If the drive is powered-off before issuing flush cache command, in some instances,
Note	the end user data in the DRAM cache might not be committed to the disk.

2.2 Formatted capacity

Model	Formatted capacity*	Guaranteed sectors	Bytes per sector
8TB	8000GB	15,628,053,168	
6TB	6000GB	11,721,045,168	
4TB	4000GB	7,814,037,168	4096
ЗТВ	3000GB	5,860,533,168	
2TB	2000GB	3,907,029,168	

*One GB equals one billion bytes and 1TB equals one trillion bytes when referring to hard drive capacity. Accessible capacity may vary depending on operating environment and formatting.

2.2.1 LBA mode

When addressing these drives in LBA mode, all blocks (sectors) are consecutively numbered from 0 to n-1, where n is the number of guaranteed sectors as defined above.

See Section 4.3.1, "Identify Device command" (words 60-61 and 100-103) for additional information about 48-bit addressing support of drives with capacities over 137GB.

2.3 Default logical geometry

- Cylinders: 16,383
- Read/write heads: 16
- Sectors per track: 63

LBA mode

When addressing these drives in LBA mode, all blocks (sectors) are consecutively numbered from 0 to n-1, where n is the number of guaranteed sectors as defined above.

2.4 Recording and interface technology

Interface	SATA
Recording method	TGMR
Recording density (kBPI)	2294
Track density (ktracks/inch avg)	540
Areal density (Gb/in ²)	1203
Interface transfer rate (MB/s)	600
Data transfer rate (MB/s)	up to 190

2.5 Physical characteristics

Maximum height	
8TB & 6TB	26.1mm / 1.028 in
4TB, 3TB & 2TB	20.17mm / 0.794 in
Maximum width	101.6mm / 4.0 in (± 0.010 in)
Maximum length	146.99mm / 5.787 in
Typical weight	
8TB	630g / 1.389 lb
6ТВ	610g / 1.345 lb
4TB & 3TB	490g / 1.08 lb
2ТВ	415g / 0.915 lb
Cache buffer	256MB

2.6 Start/stop times

The start/stop times are listed below.

Standard models	ST8000DM004, ST6000DM003 (4 and 3-Disk)	ST4000DM004, ST3000DM007 (2-Disk)	ST2000DM005 (1-Disk)
Power-on to ready (in seconds)	15 (typical)	10 (typical)	8 (typical)
Standby to ready (in seconds)	15 (typical)	10 (typical)	8 (typical)
Ready to spindle stop (in seconds)	18 (typical)	12 (typical)	10 (typical)

Time-to-ready may be longer than normal if the drive power is removed without going through normal OS powerdown procedures.

2.7 Power specifications

The drive receives DC power (+5V or +12V) through a native SATA power connector. Refer to Figure 1 on page 20.

2.7.1 Power consumption

Power requirements for the drives are listed in Table 3 and Table 4. Typical power measurements are based on an average of drives tested, under nominal conditions, using 5.0V and 12.0V input voltage at 25°C ambient temperature. These power measurements are done with DIPM enabled.

- Spinup current is measured from the time of power-on to the time that the drive spindle reaches operating speed.
- Read/Write current is measured with the heads on track, based on three 64 sector read or write operations every 100 ms.
- The drive supports three idle modes: Performance Idle mode, Active Idle mode and Low Power Idle mode. Refer to Section 2.7.4 for power-management modes.

Power dissipation	Avg (watts 25° C)	Avg 5V typ amps	Avg 12V typ amps
Spinup	—	—	2.0
Idle, Low Power	3.4	0.10	0.242
Read/Write	5.3	0.28	0.325
Standby	0.25	0.04	0.004
Sleep	0.25	0.04	0.004

Table 3 DC power requirements for 8TB and 6TB models

Table 4DC power requirements for 4TB, 3TB and 2TB models

Power dissipation	Avg (watts 25° C)	Avg 5V typ amps	Avg 12V typ amps
Spinup	—	_	2.0
Idle, Low Power	2.5	0.12	0.15
Read/Write	3.7	0.28	0.191
Standby	0.25	0.04	0.004
Sleep	0.25	0.04	0.004

2.7.2 Conducted noise

Input noise ripple is measured at the host system power supply across an equivalent 80-ohm resistive load on the +12 volt line or an equivalent 15-ohm resistive load on the +5 volt line.

- Using 12-volt power, the drive is expected to operate with a maximum of 120 mV peak-to-peak square-wave injected noise at up to 10MHz.
- Using 5-volt power, the drive is expected to operate with a maximum of 100 mV peak-to-peak square-wave injected noise at up to 10MHz.

Note

Equivalent resistance is calculated by dividing the nominal voltage by the typical RMS read/write current.

2.7.3 Voltage tolerance

Voltage tolerance (including noise):

- 5V ±5%
- 12V ±10%

2.7.4 Power-management modes

The drive provides programmable power management to provide greater energy efficiency. In most systems, users can control power management through the system setup program. The drive features the following power-management modes:

Power modes	Heads	Spindle	Electronics
Active	Tracking	Rotating	Full Power
Idle, Performance	Tracking	Rotating	Full Power
Idle, Active	Floating	Rotating	Partial Power
Idle, Low Power	Parked	Rotating	Partial Power
Standby	Parked	Stopped	Low Power
Sleep	Parked	Stopped	Low Power

Active mode

The drive is in Active mode during the read/write and seek operations.

Idle mode

The electronics remain powered, and the drive accepts all commands and returns to Active mode when disk access is necessary.

Standby mode

The drive enters Standby mode immediately when the host sends a Standby Immediate command. If the host has set the standby timer, the drive enters Standby mode automatically after the drive has been inactive for a specifiable length of time. The standby timer delay is established using a Standby or Idle command. In Standby mode, the electronics are in low power mode, the heads are parked and the spindle is at rest. The drive accepts all commands and returns to Active mode when disk access is necessary.

• Sleep mode

The drive enters Sleep mode after receiving a Sleep command from the host. In Sleep mode, the electronics are in low power mode, the heads are parked and the spindle is at rest. The drive leaves Sleep mode after it receives a Hard Reset or Soft Reset from the host. After receiving a reset, the drive exits Sleep mode and enters Standby mode.

• Idle and Standby timers

Each time the drive performs an Active function (read, write or seek), the standby timer is reinitialized and begins counting down from its specified delay times to zero. If the standby timer reaches zero before any drive activity is required, the drive makes a transition to Standby mode. In both Idle and Standby mode, the drive accepts all commands and returns to Active mode when disk access is necessary.

2.8 Environmental specifications

This section provides the temperature, humidity, shock, and vibration specifications for Barracuda drives. Ambient temperature is defined as the temperature of the environment immediately surrounding the drive. Above 1000ft. (305 meters), the maximum temperature is derated linearly by 1°C every 1000 ft. Refer to Section 3.4 on page 21 for base plate measurement location.

2.8.1 Ambient Temperature

Non-operating (Ambient)	–40° to 70°C (–40° to 158°F)	
Operating ambient (min °C)	0° (32°F)	
Operating (Drive case max °C)	60° (140°F) [†]	

Seagate does not recommend operating at sustained case temperatures above 60°C. Operating at higher temperatures will reduce useful life of the product.

2.8.2 Temperature gradient

Operating	20°C per hour (68°F per hour max), without condensation	
Non-operating	30°C per hour (54°F per hour max)	

2.8.3 Humidity

2.8.3.1 Relative humidity

Operating	5% to 90% non-condensing (30% per hour max)
non-operating	5% to 95% non-condensing (30% per hour max)

2.8.3.2 Wet bulb temperature

Operating	30°C / 86°F (rated)
Non-operating 40°C / 104°F (rated)	

2.8.4 Altitude

Operating	-304m to 3048m (-1000 ft. to 10,000 ft.)
Non-operating	-304m to 12,192m (-1000 ft. to 40,000+ ft.)

2.8.5 Shock

All shock specifications assume that the drive is mounted securely with the input shock applied at the drive mounting screws. Shock may be applied in the X, Y or Z axis.

2.8.5.1 Operating shock

These drives comply with the performance levels specified in this document when subjected to a maximum operating shock of 80 Gs (read) / 70 Gs (write) based on half-sine shock pulses of 2ms during read operations. Shocks should not be repeated more than two times per second.

2.8.5.2 Non-operating shock

8TB, 6TB, 4TB & 3TB

The non-operating shock level that the drive can experience without incurring physical damage or degradation in performance when subsequently put into operation is 300 Gs based on a non-repetitive half-sine shock pulse of 2ms duration.

2TB

The non-operating shock level that the drive can experience without incurring physical damage or degradation in performance when subsequently put into operation is 350 Gs based on a non-repetitive half-sine shock pulse of 2ms duration.

2.8.5.3 Operating vibration

The maximum vibration levels that the drive may experience while meeting the performance standards specified in this document are specified below.

10Hz to 22Hz	0.25 Gs (Limited displacement)
22Hz to 350Hz	0.50 Gs
350Hz to 500Hz	0.25 Gs

All vibration specifications assume that the drive is mounted securely with the input vibration applied at the drive mounting screws. Vibration may be applied in the X, Y or Z axis. Throughput may vary if improperly mounted.

2.8.6 Non-operating vibration

The maximum non-operating vibration levels that the drive may experience without incurring physical damage or degradation in performance when subsequently put into operation are specified below.

5Hz to 22Hz	3.0 Gs (Limited displacement)
22Hz to 350Hz	3.0 Gs
350Hz to 500Hz	3.0 Gs

2.9 Acoustics

Drive acoustics are measured as overall A-weighted acoustic sound power levels (no pure tones). All measurements are consistent with ISO document 7779. Sound power measurements are taken under essentially free-field conditions over a reflecting plane. For all tests, the drive is oriented with the cover facing upward.

Note	For seek mode tests, the drive is placed in seek mode only. The number of seeks per second is defined by the following equation:
	(Number of seeks per second = 0.4 / (average latency + average access time

Table 5 Fluid Dynamic Bearing (FDB) motor acoustics

dole 5 Thata Dynamic Dearing (TDD) motor acoustics			
	ldle*	Seek	
8TB & 6TB models	2.3 bels (typical) 2.5 bels (max)	2.5 bels (typical) 2.6 bels (max)	
4TB & 3TB models	2.2 bels (typical) 2.4 bels (max)	2.4 bels (typical) 2.7 bels (max)	
2TB models	2.0 bels (typical) 2.1 bels (max)	2.2 bels (typical) 2.3 bels (max)	

*During periods of drive idle, some offline activity may occur according to the S.M.A.R.T. specification, which may increase acoustic and power to operational levels.

2.9.1 Test for Prominent Discrete Tones (PDTs)

Seagate follows the ECMA-74 standards for measurement and identification of PDTs. An exception to this process is the use of the absolute threshold of hearing. Seagate uses this threshold curve (originated in ISO 389-7) to discern tone audibility and to compensate for the inaudible components of sound prior to computation of tone ratios according to Annex D of the ECMA-74 standards.

2.10 Electromagnetic immunity

When properly installed in a representative host system, the drive operates without errors or degradation in performance when subjected to the radio frequency (RF) environments defined in Table 6.

Test	Description	Performance level	Reference standard
Electrostatic discharge	Contact, HCP, VCP: ± 4 kV; Air: ± 8 kV	В	EN61000-4-2: 95
Radiated RF immunity	80MHz to 1,000MHz, 3 V/m, 80% AM with 1kHz sine 900MHz, 3 V/m, 50% pulse modulation @ 200Hz	A	EN61000-4-3: 96 ENV50204: 95
Electrical fast transient	\pm 1 kV on AC mains, \pm 0.5 kV on external I/O	В	EN61000-4-4: 95
Surge immunity	\pm 1 kV differential, \pm 2 kV common, AC mains	В	EN61000-4-5:95
Conducted RF immunity	150kHz to 80MHz, 3 Vrms, 80% AM with 1kHz sine	A	EN61000-4-6: 97
Voltage dips, interrupts	0% open, 5 seconds 0% short, 5 seconds 40%, 0.10 seconds 70%, 0.01 seconds	C C C B	EN61000-4-11: 94

 Table 6
 Radio frequency environments

2.11 Warranty

To determine the warranty for a specific drive, use a web browser to access the following web page: <u>http://www.seagate.com/support/warranty-and-replacements/</u>

From this page, click on "Is my Drive under Warranty". Users will be asked to provide the drive serial number, model number (or part number) and country of purchase. The system will display the warranty information for the drive.

2.11.1 Data loss under power interruption with write cache enabled

Drive preserves its data during all operations except in cases where power to the drive is interrupted during write operations. This could result in either an uncorrected data error being reported, or the entire sector/track becoming unreadable. This can be permanently recovered by rewriting to the same location on the drive. Additionally any data present in the DRAM buffer will not be written to the disk media, additionally, the drive will not be able to return the original data.

In order to prevent this data loss, the host should issue a standby immediate or flush cache command before a controlled power off operation to the drive.

2.11.2 Storage

Maximum storage periods are 180 days within original unopened Seagate shipping package or 60 days unpackaged within the defined non-operating limits (refer to environmental section in this manual). Storage can be extended to 1 year packaged or unpackaged under optimal environmental conditions (25°C, <40% relative humidity non-condensing, and non-corrosive environment). During any storage period the drive non-operational temperature, humidity, wet bulb, atmospheric conditions, shock, vibration, magnetic and electrical field specifications should be followed.

2.12 Agency certification

2.12.1 Safety certification

These products are certified to meet the requirements of UL60950-1, CSA60950-1 and EN60950 and so marked as to the certify agency.

The following regulatory model numbers represent all features and configurations within the series:

SKR002 for (2/3/4TB models)

SKR004 for (5/6/8TB models)

2.12.2 Electromagnetic compatibility

Hard drives that display the CE mark comply with the European Union (EU) requirements specified in the Electromagnetic Compatibility Directive 2014/30/EU. Testing is performed to the levels specified by the product standards for Information Technology Equipment (ITE). Emission levels are defined by EN 55032, Class B and the immunity levels are defined by EN 55024.

Drives are tested in representative end-user systems. Although CE-marked Seagate drives comply with the directives when used in the test systems, we cannot guarantee that all systems will comply with the directives. The drive is designed for operation inside a properly designed enclosure, with properly shielded I/O cable (if necessary) and terminators on all unused I/O ports. Computer manufacturers and system integrators should confirm EMC compliance and provide CE marking for their products.

Korean RRA

If these drives have the Korean Communications Commission (KCC) logo, they comply with paragraph 1 of Article 11 of the Electromagnetic Compatibility control Regulation and meet the Electromagnetic Compatibility (EMC) Framework requirements of the Radio Research Agency (RRA) Communications Commission, Republic of Korea.

These drives have been tested and comply with the Electromagnetic Interference/Electromagnetic Susceptibility (EMI/ EMS) for Class B products. Drives are tested in a representative, end-user system by a Korean-recognized lab.

기 종 별	사 용 자 안 내 문
В 급 기기 (가정용 방송통신기자재)	이 기기는 가정용(B급) 전자파적합기기로서 주로 가정에서 사용하는 것을 목적으로 하며, 모든 지역에서 사용할 수 있습니다.

Australian RCM Compliance Mark

If these models have the RCM marking, they comply with the Australia/New Zealand Standard AS/NZS CISPR32: 2015 and meet the Electromagnetic Compatibility (EMC) Framework requirements of the Australian Communication and Media Authority (ACMA).

2.12.3 FCC verification

These drives are intended to be contained solely within a personal computer or similar enclosure (not attached as an external device). As such, each drive is considered to be a subassembly even when it is individually marketed to the customer. As a subassembly, no Federal Communications Commission verification or certification of the device is required.

Seagate has tested this device in enclosures as described above to ensure that the total assembly (enclosure, disk drive, motherboard, power supply, etc.) does comply with the limits for a Class B computing device, pursuant to Subpart J, Part 15 of the FCC rules. Operation with non-certified assemblies is likely to result in interference to radio and television reception.

Radio and television interference. This equipment generates and uses radio frequency energy and if not installed and used in strict accordance with the manufacturer's instructions, may cause interference to radio and television reception.

This equipment is designed to provide reasonable protection against such interference in a residential installation. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause interference to radio or television, which can be determined by turning the equipment on and off, users are encouraged to try one or more of the following corrective measures:

- Reorient the receiving antenna.
- Move the device to one side or the other of the radio or TV.
- Move the device farther away from the radio or TV.
- Plug the computer into a different outlet so that the receiver and computer are on different branch outlets.

If necessary, users should consult the dealer or an experienced radio/television technician for additional suggestions. Users may find helpful the following booklet prepared by the Federal Communications Commission: *How to Identify and Resolve Radio-Television Interference Problems*. This booklet is available from the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402. Refer to publication number 004-000-00345-4.

2.13 Environmental protection

Seagate designs its products to meet environmental protection requirements worldwide, including regulations restricting certain chemical substances.

2.13.1 European Union Restriction of Hazardous Substances (RoHS) Directive

The European Union Restriction of Hazardous Substances (RoHS) Directive, restricts the presence of chemical substances, including Lead, Cadmium, Mercury, Hexavalent Chromium, PBB and PBDE, in electronic products, effective July 2006. This drive is manufactured with components and materials that comply with the RoHS Directive.

2.14 China Requirements — China RoHS 2

China RoHS 2 refers to the Ministry of Industry and Information Technology Order No. 32, effective July 1, 2016, titled Management Methods for the Restriction of the Use of Hazardous Substances in Electrical and Electronic Products. To comply with China RoHS 2, we determined this product's Environmental Protection Use Period (EPUP) to be 20 years in accordance with the *Marking for the Restricted Use of Hazardous Substances in Electronic and Electrical Products*, SJT 11364-2014.

中国电器电子产品有害物质限制使用管理办法

(Management Methods for the Restriction of the Use of Hazardous Substances in Electrical and Electronic Products _ China RoHS)

产品中有害物质的名称及含量

(Name and Content of the Hazardous Substances in Product)

Table 7 Hazardous Substances

O: 表示该有害物质在该部件所有均质材料中的含量均在 GB/T 26572 规定的限量要求以下。

- **O:** Indicates that the hazardous substance contained in all of the homogeneous materials for this part is below the limit requirement of GB/T26572.
- X: 表示该有害物质至少在该部件的某一均质材料中的含量超出 GB/T 26572 规定的限量要求。
- X: Indicates that the hazardous substance contained in at least one of the homogeneous materials used for this part is above the limit requirement of GB/T26572.

2.16 Corrosive environment

Seagate electronic drive components pass accelerated corrosion testing equivalent to 10 years exposure to light industrial environments containing sulfurous gases, chlorine and nitric oxide, classes G and H per ASTM B845. However, this accelerated testing cannot duplicate every potential application environment. Users should use caution exposing any electronic components to uncontrolled chemical pollutants and corrosive chemicals as electronic drive component reliability can be affected by the installation environment. The silver, copper, nickel and gold films used in Seagate products are especially sensitive to the presence of sulfide, chloride, and nitrate contaminants. Sulfur is found to be the most damaging. In addition, electronic components should never be exposed to condensing water on the surface of the printed circuit board assembly (PCBA) or exposed to an ambient relative humidity greater than 95%. Materials used in cabinet fabrication, such as vulcanized rubber, that can outgas corrosive compounds should be minimized or eliminated. The useful life of any electronic equipment may be extended by replacing materials near circuitry with sulfide-free alternatives.

3.0 Configuring and Mounting the Drive

This section contains the specifications and instructions for configuring and mounting the drive.

3.1 Handling and static-discharge precautions

After unpacking, and before installation, the drive may be exposed to potential handling and electrostatic discharge (ESD) hazards. Observe the following standard handling and static-discharge precautions:

Caution

- Before handling the drive, put on a grounded wrist strap, or ground oneself frequently by touching the metal chassis of a computer that is plugged into a grounded outlet. Wear a grounded wrist strap throughout the entire installation procedure.
- Handle the drive by its edges or frame only.
- The drive is extremely fragile—handle it with care. Do not press down on the drive top cover.
- Always rest the drive on a padded, antistatic surface until users mount it in the computer.
- Do not touch the connector pins or the printed circuit board.
- Do not remove the factory-installed labels from the drive or cover them with additional labels. Removal voids the warranty. Some factory-installed labels contain information needed to service the drive. Other labels are used to seal out dirt and contamination.

3.2 Configuring the drive

Each drive on the SATA interface connects point-to-point with the SATA host adapter. There is no master/slave relationship because each drive is considered a master in a point-to-point relationship. If two drives are attached on one SATA host adapter, the host operating system views the two devices as if they were both "masters" on two separate ports. Both drives behave as if they are Device 0 (master) devices.

SATA drives are designed for easy installation. It is usually not necessary to set any jumpers on the drive for proper operation; however, if users connect the drive and receive a "drive not detected" error, the SATA-equipped motherboard or host adapter may use a chipset that does not support SATA speed autonegotiation.

3.3 SATA cables and connectors

The SATA interface cable consists of four conductors in two differential pairs, plus three ground connections. The cable size may be 30 to 26 AWG with a maximum length of one meter (39.37 inches). See **Table 8** for connector pin definitions. Either end of the SATA signal cable can be attached to the drive or host.

For direct backplane connection, the drive connectors are inserted directly into the host receptacle. The drive and the host receptacle incorporate features that enable the direct connection to be hot pluggable and blind mateable.

For installations which require cables, users can connect the drive as illustrated in Figure 1.

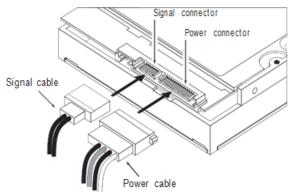

Figure 1 Attaching SATA cabling

Each cable is keyed to ensure correct orientation. BarraCuda drives support latching SATA connectors.

3.4 Drive mounting

Users can mount the drive in any orientation using four screws in the side-mounting holes or four screws in the bottommounting holes. Refer to Figure 2 for drive mounting dimensions. Follow these important mounting precautions when mounting the drive:

- Allow a minimum clearance of 0.030 inches (0.76mm) around the entire perimeter of the drive for cooling.
- Use only 6-32 UNC mounting screws.
- The screws should be inserted no more than 0.150 inch (3.81 mm) into the bottom or side mounting holes.
- Do not overtighten the mounting screws (maximum torque: 6 inch-lb).

Figure 2 Mounting dimensions (1 and 2-disk models)

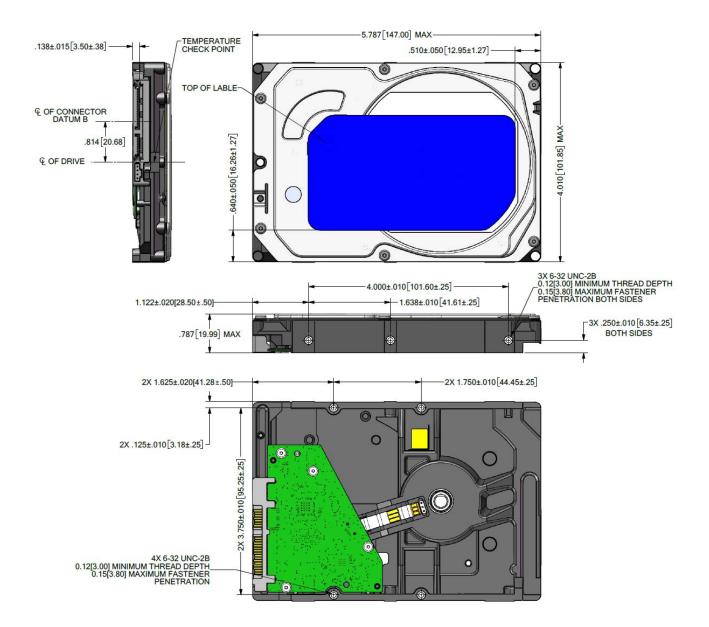

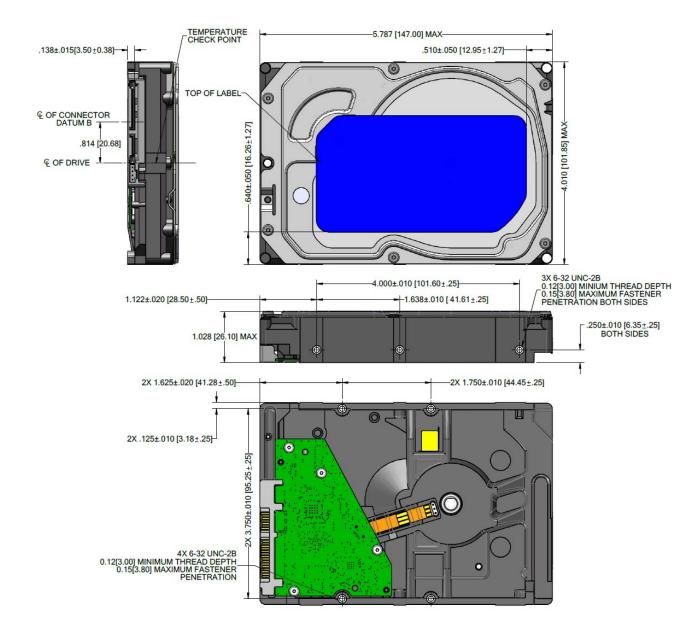

Figure 3 Mounting dimensions (3 and 4-disk models)

4.0 SATA Interface

These drives use the industry-standard Serial ATA (SATA) interface that supports FIS data transfers. It supports ATA programmed input/output (PIO) modes 0 to 4; multiword DMA modes 0 to 2, and Ultra DMA modes 0 to 6.

For detailed information about the SATA interface, refer to the "Serial ATA: High Speed Serialized AT Attachment" specification.

4.1 Hot-Plug compatibility

BarraCuda drives incorporate connectors which enable users to hot plug these drives in accordance with the SATA Revision 3.2 specification. This specification can be downloaded from <u>www.serialata.org</u>.

4.2 SATA device plug connector pin definitions

Table 8 summarizes the signals on the SATA interface and power connectors.

Segment	Pin	Function	Definition
Signal	S1	Ground	2nd mate
	S2	A+	 Differential signal pair A from Phy
	S3	A-	- Differential signal pair A from Phy
	S4	Ground	2nd mate
	S5	В-	 Differential signal pair B from Phy
	S6	B+	
	S7	Ground	2nd mate
Key and sp	acing sep	arate signal and power se	gments
Power	P1	V33	3.3V power
	P2	V33	3.3V power
	P3	V33	3.3V power, pre-charge, 2nd mate
	P4	Ground	1st mate
	P5	Ground	2nd mate
	P6	Ground	2nd mate
	P7	V5	5V power, pre-charge, 2nd mate
	P8	V5	5V power
	P9	V5	5V power
	P10	Ground	2nd mate
	P11	Ground or LED signal	If grounded, drive does not use deferred spin
	P12	Ground	1st mate.
	P13	V12	12V power, pre-charge, 2nd mate
	P14	V12	12V power
	P15	V12	12V power

Table 8 SATA connector pin definitions

Notes

- 1. All pins are in a single row, with a 1.27 mm (0.050 in) pitch.
- 2. The comments on the mating sequence apply to the case of backplane blindmate connector only. In this case, the mating sequences are:
 - the ground pins P4 and P12.
 - the pre-charge power pins and the other ground pins.
 - the signal pins and the rest of the power pins.
- 3. There are three power pins for each voltage. One pin from each voltage is used for pre-charge when installed in a blind-mate backplane configuration.
 - All used voltage pins (V_x) must be terminated.

4.3 Supported ATA commands

The following table lists SATA standard commands that the drive supports. For a detailed description of the ATA commands, refer to the Serial ATA International Organization: Serial ATA Revision 3.0 (<u>http://www.sata-io.org</u>).

See "S.M.A.R.T. commands" on page 32 for details and subcommands used in the S.M.A.R.T. implementation.

4.3.1 Identify Device command

The Identify Device command (command code EC_H) transfers information about the drive to the host following power up. The data is organized as a single 512-byte block of data, whose contents are shown in on page 24. All reserved bits or words should be set to zero. Parameters listed with an "x" are drive-specific or vary with the state of the drive.

The following commands contain drive-specific features that may not be included in the SATA specification.

Table 10 Identify Device commands

Word	Description	Value
0	Configuration information: • Bit 15: 0 = ATA; 1 = ATAPI • Bit 7: removable media • Bit 6: removable controller • Bit 0: reserved	0C5A _H
1	Number of logical cylinders	16,383
2	 Specific configuration: 37C8h Device requires SET FEATURES subcommand to spin-up after power-up and IDENTIFY DEVICE data is incomplete. 738Ch Device requires SET FEATURES subcommand to spin-up after power-up and IDENTIFY DEVICE data is complete. 8C73h Device does not require SET FEATURES subcommand to spin-up after power-up and IDENTIFY DEVICE data is incomplete. C837h Device does not require SET FEATURES subcommand to spin-up after power-up and IDENTIFY DEVICE data is incomplete. 	C837 _H
3	Number of logical heads	16
4	Retired	0000 _H
5	Retired	0000 _H
6	Number of logical sectors per logical track: 63	003F _H
7–9	Retired	0000 _H
10–19	Serial number: (20 ASCII characters, 0000 _H = none)	ASCII
20	Retired	0000 _H
21	Retired	0400 _H
22	Obsolete	0000 _H
23–26	Firmware revision (8 ASCII character string, padded with blanks to end of string)	x.xx
27–46	Drive model number: (40 ASCII characters, padded with blanks to end of string)	
47	(Bits 7–0) Maximum sectors per interrupt on Read multiple and Write multiple (16)	8010 _H
48	Trusted Computing feature set options: 15 Shall be cleared to zero 14 Shall be set to one 13:1 Reserved for the Trusted Computing Group 0 Trusted Computing feature set is supported	4000 _H
49	Standard Standby timer, IORDY supported and may be disabled	2F00 _H
		l

Table 10 Identify Device commands (continued)

Word	Description	Value
50	Capabilities: (see 7.17.7.17) 15 Shall be cleared to zero 14 Shall be set to one 13:2 Reserved 1 Obsolete 0 Shall be set to one to indicate a vendor specific Standby timer value minimum	4000 _H
51	PIO data-transfer cycle timing mode	0200 _H
52	Retired (Obsolete)	0200 _H
53	 15:8 Free-fall Control Sensitivity 7:3 Reserved 2 the fields reported in word 88 are valid 1 the fields reported in words (70:64) are valid 0 Obsolete 	0007 _H
54	Number of current logical cylinders (Obsolete)	xxxx _H
55	Number of current logical heads (Obsolete)	xxxx _H
56	Number of current logical sectors per logical track (Obsolete)	xxxx _H
57–58	Current capacity in sectors (Obsolete)	xxxx _H
59	 15 The BLOCK ERASE EXT command is supported 14 The OVERWRITE EXT command is supported 13 The CRYPTO SCRAMBLE EXT command is supported 12 The Sanitize feature set is supported 11:9 Reserved 8 Multiple logical sector setting is valid 7:0 Current setting for number of logical sectors that shall be transferred per DRQ data block on READ/WRITE Multiple commands 	5C10 _H
60–61	Total number of user-addressable LBA sectors available (see Section 2.2 for related information) *Note: The maximum value allowed in this field is: 0FFFFFFh (268,435,455 sectors, 137GB). Drives with capacities over 137GB will have 0FFFFFFh in this field and the actual number of user-addressable LBAs specified in words 100-103. This is required for drives that support the 48-bit addressing feature.	0FFFFFFh*
62	Obsolete	0000 _H
63	Multiword DMA active and modes supported (see note following this table)	<i>xx</i> 07 _H
64	Advanced PIO modes supported (modes 3 and 4 supported)	0003 _H
65	Minimum multiword DMA transfer cycle time per word (120 nsec)	0078 _H
66	Recommended multiword DMA transfer cycle time per word (120 nsec)	0078 _H
67	Minimum PIO cycle time without IORDY flow control (240 nsec)	0078 _H
68	Minimum PIO cycle time with IORDY flow control (120 nsec)	0078 _H

Table 10 Identify Device commands (continued)

Note

Advanced Power Management (APM) and Automatic Acoustic Management (AAM) features are not supported.

Note

See the bit descriptions below for words 63, 84, and 88 of the Identify Drive data.

Descr	scription (if bit is set to 1)				
	Bit	Word 63			
	0	Multiword DMA mode 0 is supported.			
	1	Multiword DMA mode 1 is supported.			
	2	Multiword DMA mode 2 is supported.			
	8	Multiword DMA mode 0 is currently active.			
9 Multiword DMA mode 1 is currently active.		Multiword DMA mode 1 is currently active.			
	10	Multiword DMA mode 2 is currently active.			
	Bit Word 84				
	0	SMART error login is supported.			
	1	SMART self-test is supported.			
	2	Media serial number is supported.			
	3	Media Card Pass Through Command feature set is supported.			
	4	Streaming feature set is supported.			
	5	GPL feature set is supported.			
	6	WRITE DMA FUA EXT and WRITE MULTIPLE FUA EXT commands are supported.			
	7	WRITE DMA QUEUED FUA EXT command is supported.			
	8	64-bit World Wide Name is supported.			
	9-10	Obsolete.			
	11-12	Reserved for TLC.			
	13	IDLE IMMEDIATE command with IUNLOAD feature is supported.			
	14	Shall be set to 1.			
	15	Shall be cleared to 0.			
	Bit	Word 88			
	0	Ultra DMA mode 0 is supported.			
	1	Ultra DMA mode 1 is supported.			
	2	Ultra DMA mode 2 is supported.			
	3	Ultra DMA mode 3 is supported.			
	4	Ultra DMA mode 4 is supported.			
	5	Ultra DMA mode 5 is supported.			
	6	Ultra DMA mode 6 is supported.			
	8	Ultra DMA mode 0 is currently active.			
	9	Ultra DMA mode 1 is currently active.			
	10	Ultra DMA mode 2 is currently active.			
	11	Ultra DMA mode 3 is currently active.			
	12	Ultra DMA mode 4 is currently active.			
	13	Ultra DMA mode 5 is currently active.			
	14	Ultra DMA mode 6 is currently active.			

4.3.2 Set Features command

This command controls the implementation of various features that the drive supports. When the drive receives this command, it sets BSY, checks the contents of the Features register, clears BSY and generates an interrupt. If the value in the register does not represent a feature that the drive supports, the command is aborted. Power-on default has the read look-ahead and write caching features enabled. The acceptable values for the Features register are defined as follows:

Table 11	Set Features command	
02 _H	Enable write cache (<i>default</i>)	
03 _H	Set transfer mode (based on value in Sector Count register) Sector Count register values:	
	00 _H Set PIO mode to default (PIO mode 2)	
	01 _H Set PIO mode to default and disable IORDY (PIO mode 2)	
	08 _H PIO mode 0	
	09 _H PIO mode 1	
	0A _H PIO mode 2	
	0B _H PIO mode 3	
	0C _H PIO mode 4 (<i>default</i>)	
	20 _H Multiword DMA mode 0	
	21 _H Multiword DMA mode 1	
	22 _H Multiword DMA mode 2	
	40 _H Ultra DMA mode 0	
	41 _H Ultra DMA mode 1	
	42 _H Ultra DMA mode 2	
	43 _H Ultra DMA mode 3	
	44 _H Ultra DMA mode 4	
	45 _H Ultra DMA mode 5	
	46 _H Ultra DMA mode 6	
06 _H	Enable the PUIS feature set	
07 _H	PUIS feature set device spin-up	
10 _H	Enable use of SATA features	
55 _H	Disable read look-ahead (read cache) feature	
82 _H	Disable write cache	
86 _H	Disable the PUIS feature set	
90 _H	Disable use of SATA features	
AA _H	Enable read look-ahead (read cache) feature (default)	
F1 _H	Report full capacity available	

	At power-on, or after a hardware or software reset, the
Note	default values of the features are as indicated above.

4.3.3 S.M.A.R.T. commands

S.M.A.R.T. provides near-term failure prediction for disk drives. When S.M.A.R.T. is enabled, the drive monitors predetermined drive attributes that are susceptible to degradation over time. If self-monitoring determines that a failure is likely, S.M.A.R.T. makes a status report available to the host. Not all failures are predictable. S.M.A.R.T. predictability is limited to the attributes the drive can monitor. For more information on S.M.A.R.T. commands and implementation, see the *Draft ATA-5 Standard*.

SeaTools diagnostic software activates a built-in drive self-test (DST S.M.A.R.T. command for D4_H) that eliminates unnecessary drive returns. The diagnostic software ships with all new drives and is also available at: <u>http://seatools.seagate.com</u>.

This drive is shipped with S.M.A.R.T. features disabled. Users must have a recent BIOS or software package that supports S.M.A.R.T. to enable this feature. The table below shows the S.M.A.R.T. command codes that the drive uses.

Code in features register	S.M.A.R.T. command
D0 _H	S.M.A.R.T. Read Data
D2 _H	S.M.A.R.T. Enable/Disable Attribute Autosave
D3 _H	S.M.A.R.T. Save Attribute Values
D4 _H	S.M.A.R.T. Execute Off-line Immediate (runs DST)
D5 _H	S.M.A.R.T. Read Log Sector
D6 _H	S.M.A.R.T. Write Log Sector
D8 _H	S.M.A.R.T. Enable Operations
D9 _H	S.M.A.R.T. Disable Operations
DA _H	S.M.A.R.T. Return Status

Table 12	S.M.A.R.T. commands
1401012	

Note

If an appropriate code is not written to the Features Register, the command is aborted and 0x04 (abort) is written to the Error register.
