

Surge protection Protection Box

High performance / low cost protection for expensive or delicate equipment

The Protection Box multi-way block with surge protection is a simple, low cost solution for protecting delicate equipment such as:

- Computers, peripherals and multimedia
- TV, Video and Hi-Fi equipment: Home ciner DVD writers, digital decoders, etc.
- Broadband modems (Internet and TV)
- IP telephony
- Household goods, etc.

Effective surge protection

The Protection Box is designed to filter the power supply for delicate equipment to protect it against surges, interference and the indirect effects of lightning.

The high performance of the Protection Box is based on an advanced design with surge protection in compliance with IEC 61643-1.

Complete protection

The Protection Box range has models with 1, 5 or 8 sockets. Some models also provide protection for telephone connections that can carry surges to the equipment.

- Tel@ models: with telephone / broadband Internet access protection
- Tel@ + TV models: with telephone / broadband Internet access protection + Audio/Video protection module (surge protection for television and FM radio with TV and F-Type connectors)

Practical and economical: Replaceable surge protection module

(Protection Box 5 Tel@, 5 Tel@ + TV and 8 Tel@+TV)

The surge protective devices for these models are grouped into a pluggable module for:

- easy replacement if the surge protective devices are destroyed by a major surge (no need to disconnect the equipment and the pluggable unit is a MGE standard replacement part)
- can be updated (adding functions, changing connectors, etc.)

Free insurance

MGE offers insurance for the equipment connected (applicable for EU countries and Norway only). This insurance is included in the purchase price of the Protection Box and covers up to €50,000 for an 8 socket model to cover damage caused by a failure of the surge protection.

And lots of features to simplify life

- Power on and surge protection active indicators.
- Power Line Communications compatibility (Protection Box 5/8) for connecting PLC modems.
- Cable tidies and cable markers supplied (5 and 8 socket models).
- Sockets arranged to allow blocks to be stacked side by side.

Protection Box: 1 to 8 sockets, ideal for...

... high performance surge protection for delicate equipment in the home: home computing, HI-FI, video, TV.
