GAMING OC MEMORY

High Performance Overclocking Memory

Look no further if you're seeking a high-performance overclocking Gaming OC memory. Gaming OC Memory aims to follow the footsteps of iCHILL memory but targeted for the high-performance overclocking market. It will come in the capacities of 8GB and 2x 8GB kits (16GB) at speeds of 2666 MHz up to 3200 MHz and with ultra-low latencies up to 15 and 16 CL. The memory modules will be equipped with a unique heat spreader design that can optimize system performance, increase a smooth gaming experience and give your gaming an extra kick of overclocked awesomeness.

The Gaming OC memory RGB LED's looks best when combined with any iCHILL's graphics card with vibrant RGB lighting such as the iCHILL X3 JEKYL. The RGB LED's magnificent display of intensive hues provide a powerful visual cue for the gamer to be ready and play to annihilate, possessing our core message of being 'Brutal by Nature.'. The RGB LED's can be tuned by the gamer to heart's desire to any setting with a colour scheme to sync with the gamer to become one with the machine.

AWESOME RGB LED FOR YOUR DREAM PC

The GAMING OC memory series are customized with your motherboard software and gives your system a boost. Not just in performance but certainly in creating your own style. Adjust colors, brightness or add effects to it and create your own unique 'brutal' dream machine.

HIGH SPEEDS. ULTRA FAST LATENCIES. HIGH-PERFORMANCE OVERCLOCKING.

The Gaming OC memory series comes in the capacities of 8GB and 2x 8GB kits (16GB) at speeds of 2666 MHz up to 3200 MHz and with ultra-low latencies up to 15 and 16 CL ensuring you get high-performance overclocking gaming.

RGB HEAVEN TO STEALTH AND SLEEK

Gaming OC memory adopted the no nonsense approach so that the series not only performs excellently but also appeals to different users with RGB version for disco fever heaven and non-RGB version for the more subtle gamer who prefers a stealth and sleeker look.
